

Lenovo IdeaPad G50-45 Fan Replacement

After reading this guide you should be able to replace the fan in a Lenovo IdeaPad G50-45. Make sure to read the troubleshooting page for this device before hand so you know that this is the correct repair guide for your problem.

Written By: Robert Muir

TOOLS:

- [Flathead Screwdriver](#) (1)
- [Phillips #2 Screwdriver](#) (1)

PARTS:

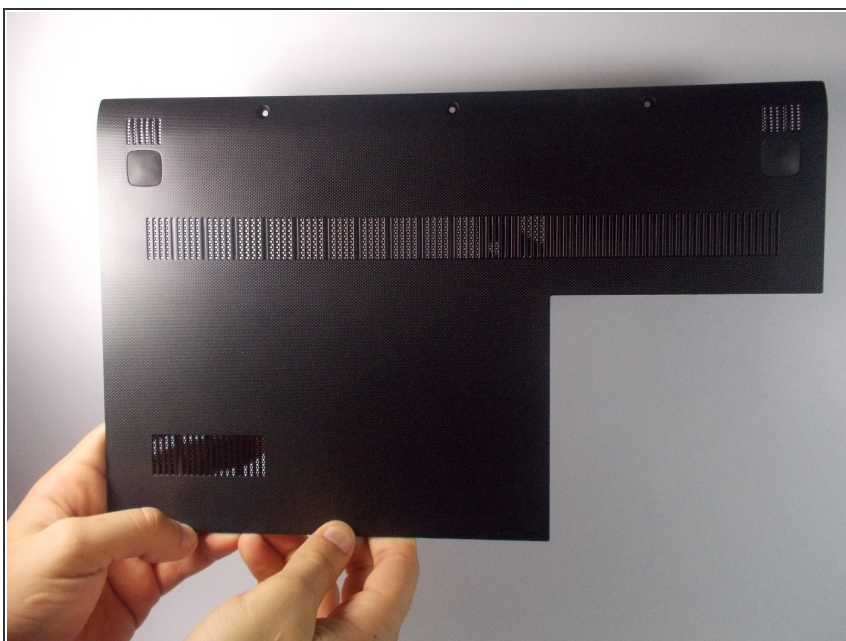

- [Lenovo IdeaPad G50-45 Fan Replacement](#) (1)

Step 1 — Fan

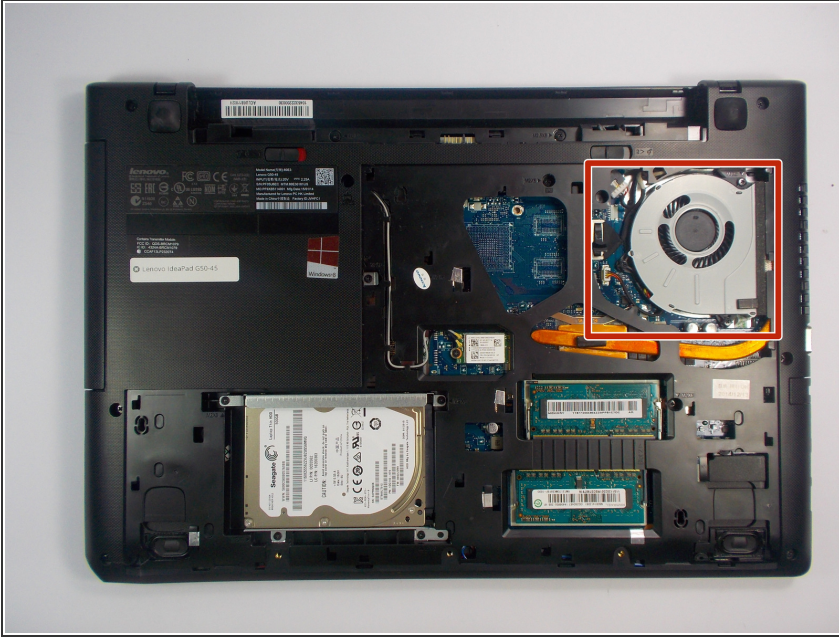

- Safely flip the device upside down and locate the 3 screws circled below, then unscrew them.

Step 2

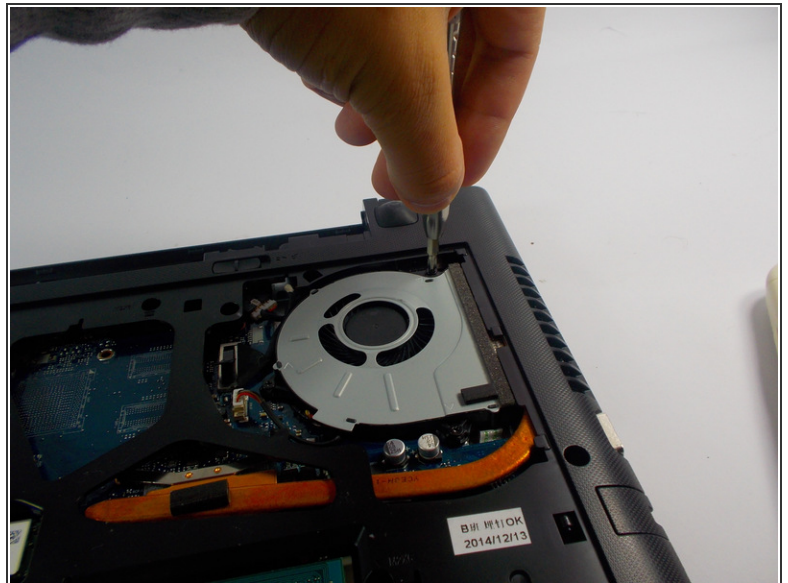

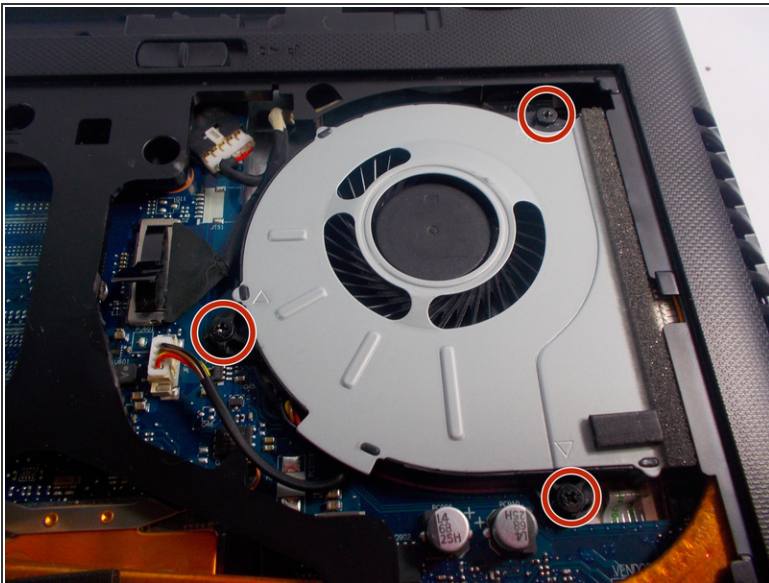

- Slide, do not lift, the bottom panel off once the 3 screws are off.

Step 3

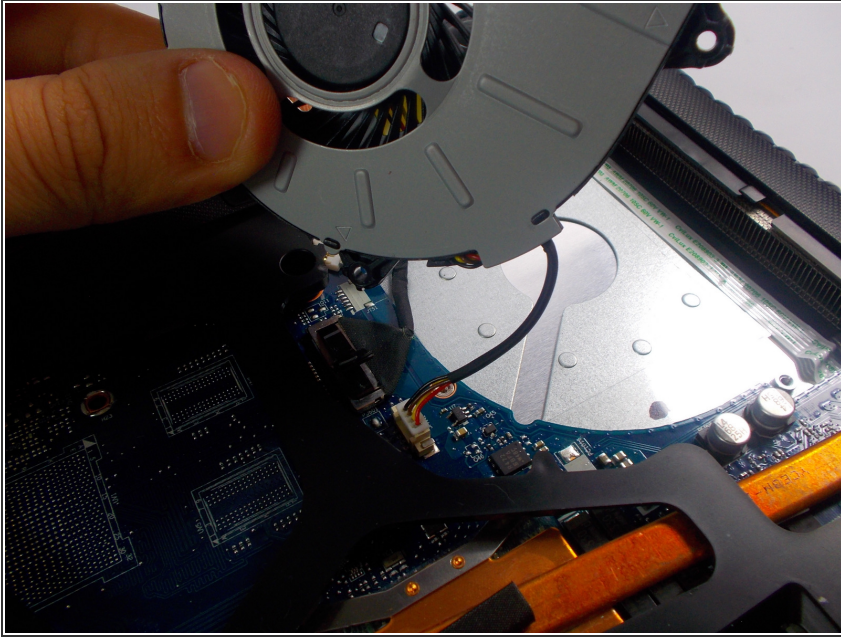

- Locate the fan in the upper right corner it is above the orange bar and appears to be a silver semicircle.

Step 4

- There are 3 screws attaching the fan to the device on the top and left side of the fan. Remove both.

Step 5

- Once the screws are removed slowly lift the fan out, there will be a thin wire connected to the device and fan still, Firmly grasp the white end of the wire where the wire splits into 2 and pull it out.

Step 6

- The fan should be removed now and appear as so.

To reassemble your device, follow these instructions in reverse order.
